

ESP32-S3 Serial Data Board

Posted 8 minutes ago

 Worldwide

Summary

I already have a Schematic and PCB Design created, but the PCB is only 2 layer and I am having Wifi signal issues. I need someone to fix any issues and convert the design to a 4 layer design.

In General:
Create a PCB based on an ESP32-S3 with a u.fl antenna.
The board will connect to an external 5v logic RS232 device, receive serial data from this device, and transmit the data over wifi. The ESP32 will need to be battery powered and be able to recharge the battery.

The PCB should be designed in KiCAD and parts selected that are available for JLCPCB ordering and assembly.
